# EPA's PFAS Strategic Roadmap

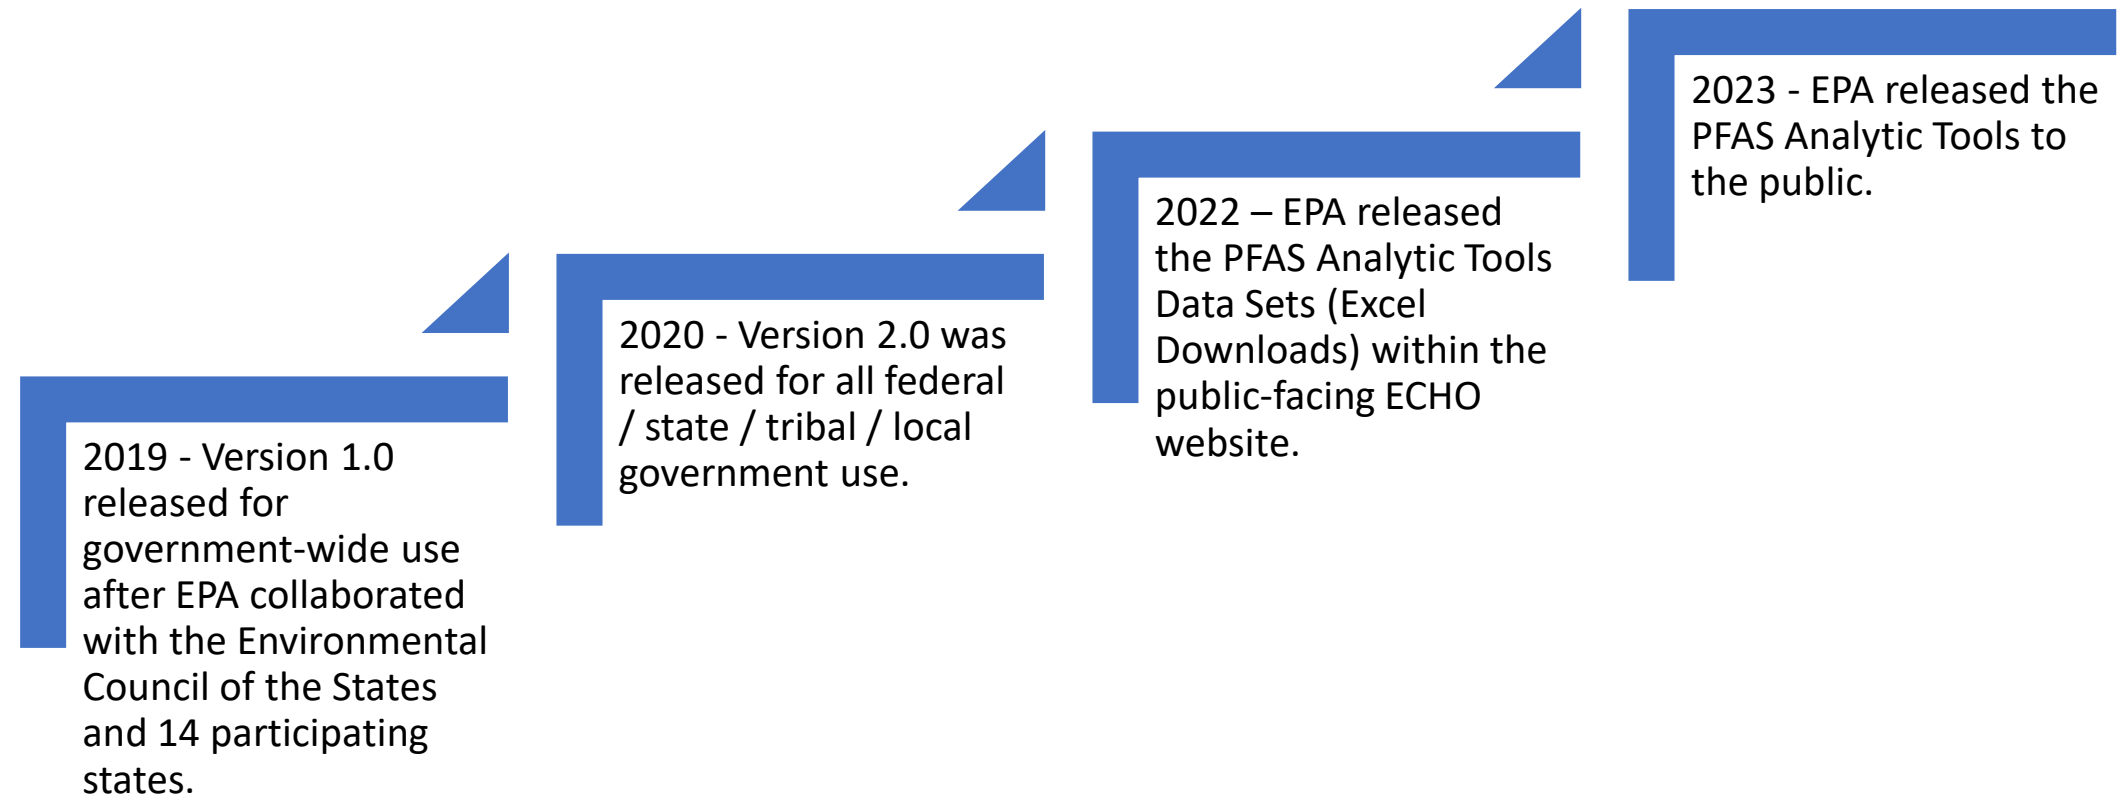

- In October 2021, EPA released the PFAS Strategic Roadmap, highlighting concrete actions the Agency will take across a range of environmental media and EPA program offices to protect people and the environment from PFAS contamination.
- The Roadmap is guided by three primary goals:
  - **Research:** Investing in research, development, and innovation to incorporate the best-available science into EPA's work.
  - **Restrict:** Working to proactively prevent PFAS from entering air, land, and water at levels that can adversely impact human health and the environment.
  - **Remediate:** Broadening and accelerating the cleanup of PFAS contamination to protect human health and ecological systems.

# Goals of the PFAS Analytic Tools

- Develop an integrated resource to understand where PFAS detections are being identified across a wide set of databases.
- Compile as much nationally available data on PFAS as possible into an easy-to-use, automatically refreshed tool.
- Develop standard methods to extract PFAS chemical data from national data systems and develop best practices for regulatory partners that would like to contribute information.
- Support EPA investigations into PFAS contamination and further the collaboration with federal/state/local/tribal partners as noted in the [EPA PFAS Strategic Roadmap \(Link to 2022 Progress Report\)](#) – see p.8).

# Development History

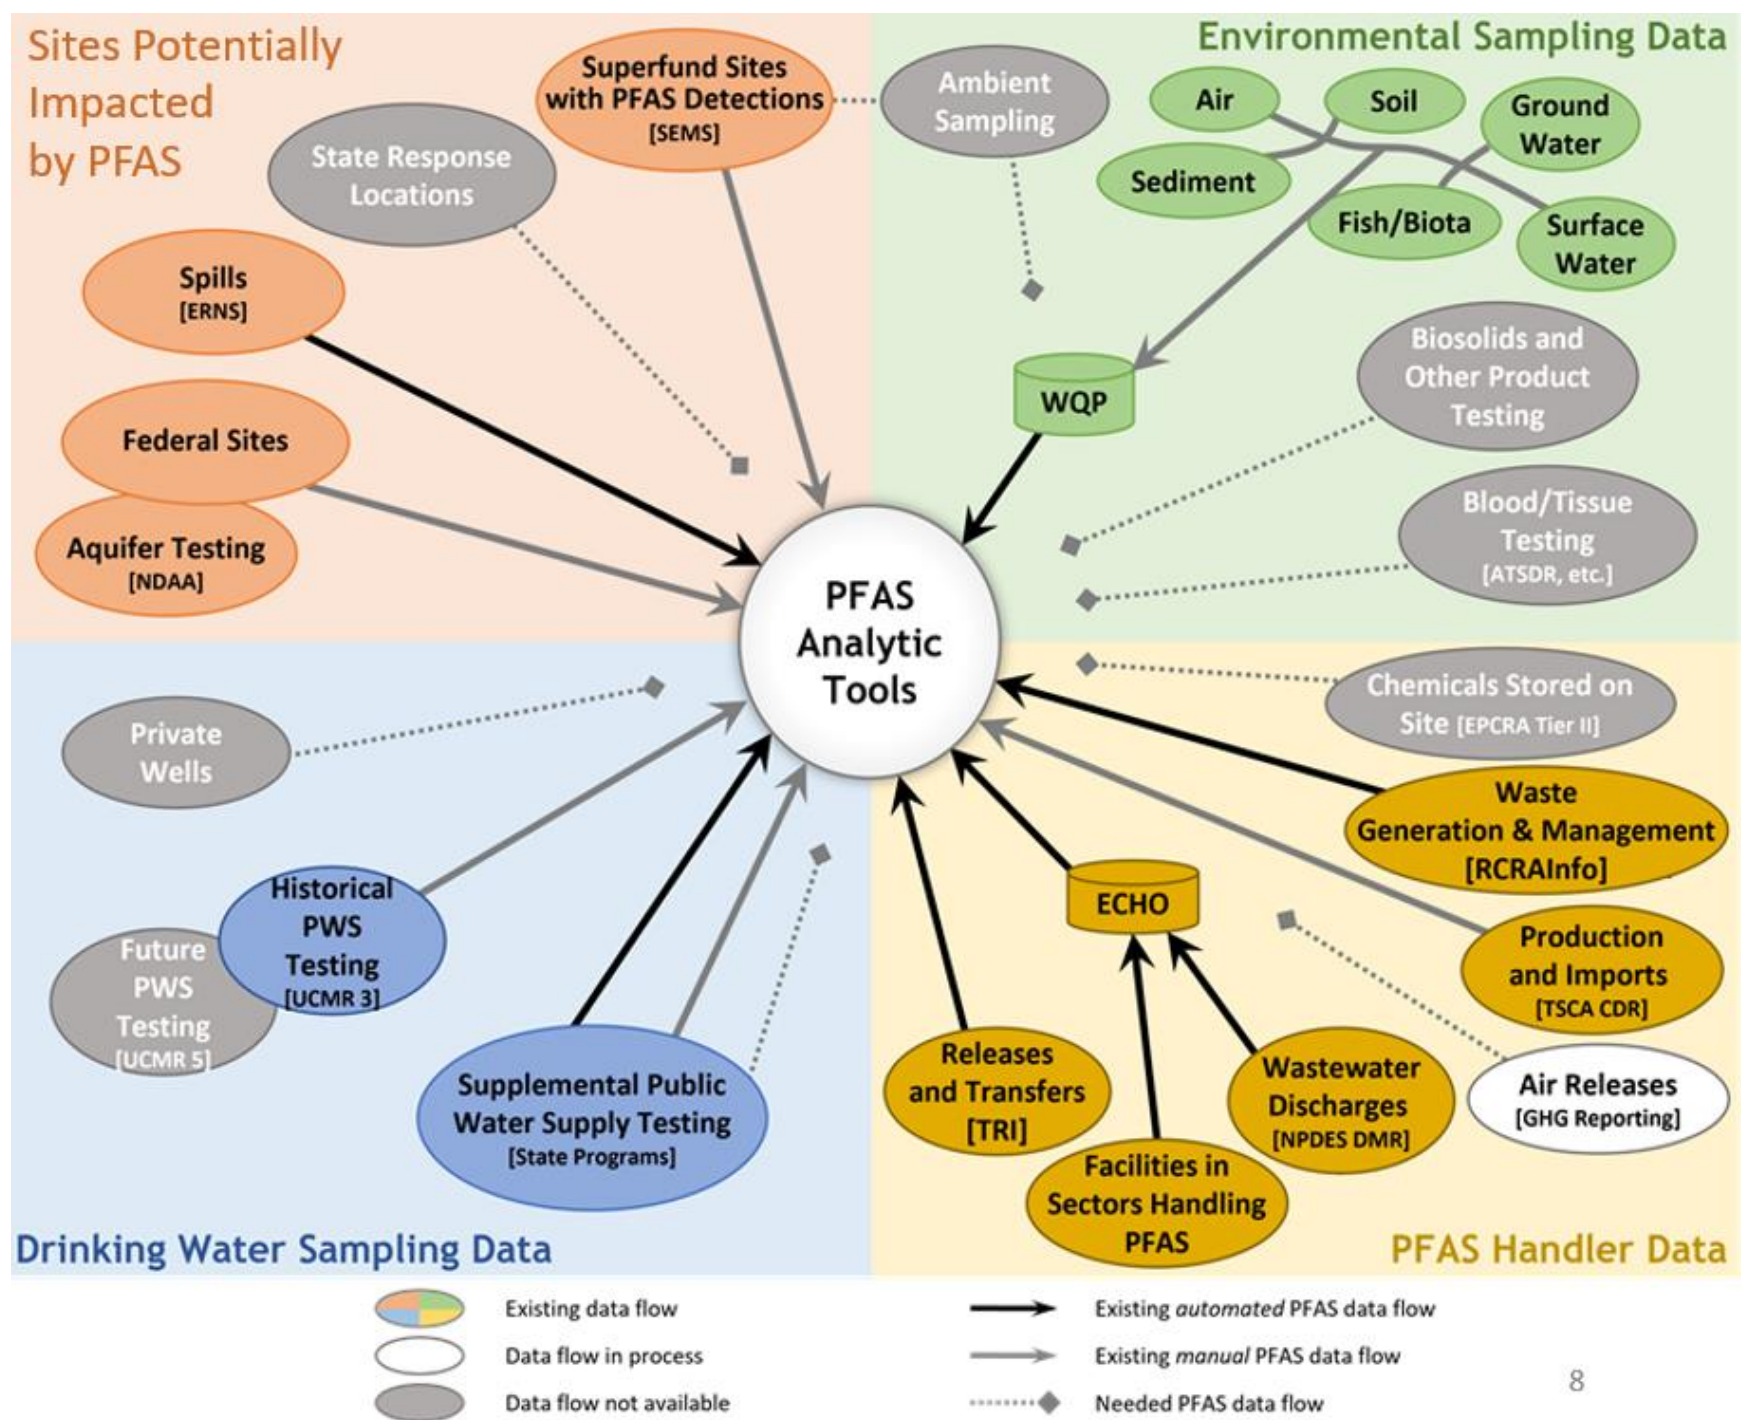

2019 - Version 1.0 released for government-wide use after EPA collaborated with the Environmental Council of the States and 14 participating states.

2020 - Version 2.0 was released for all federal / state / tribal / local government use.

2022 – EPA released the PFAS Analytic Tools Data Sets (Excel Downloads) within the public-facing ECHO website.

2023 - EPA released the PFAS Analytic Tools to the public.
