

Coalition Support for USGS Streamgauge Networks and Modernization

Congressman Mike Simpson, Chair
Congresswoman Chellie Pingree, Ranking Member
House Appropriations Subcommittee on Interior, Environment & Related Agencies
2363 Rayburn House Office Building
Washington, D.C. 20515

February 23, 2024

RE: WATER DATA & SCIENCE PROGRAM FUNDING
Interior Department Appropriations for FY2025

Summary of Coalition's Requests for FY2025:
Federal Priorities Streamgages = \$33.0 M
Cooperative Matching Funds Program = \$68M
(includes \$33M streamgauge support and studies)
NGWOS/data modernization = \$35M

Dear Chairman Simpson and Ranking Member Pingree:

Our coalition of 99 water management and use stakeholders requests your support to sufficiently fund the United States Geological Survey's (USGS) Federal Priorities Streamgauge network and related programs for the upcoming Fiscal Year (FY) 2025 budget appropriation.

Our organizations rely heavily on these streamgages to make critical decisions about public safety, respond to extreme weather events, conservation and to support the nation's economy. The information they provide is extensive and invaluable for managing, protecting, and planning to support and improve the resilience of the nation's important water resource infrastructure. Funding for the network needs to keep pace with inflation so that the information from this network continues to be available for many different purposes.

Our coalition's funding request is summarized below. The final section of this letter explains in more detail why we as a nation need to adequately fund the network of streamgages.

Summary of funding request

Our broad coalition of state agencies, interstate commissions, associations, universities, non-governmental organizations, and private industry submit the FY 2025 USGS budget appropriation request as follows: **\$33M** dedicated to Federal Priorities Streamgages, **\$68M** for the Cooperative Matching Funds Program (including \$33M for streamgauge support) and **\$35M** for Next Generation Water Observing System and data delivery modernization.

Supporting details

Federal Priority Streamgages (FPS) -- \$33M

Operational costs of the FPS network nationwide have grown by an average of approximately 5 percent per year since 2016, totaling \$3M. With further inflation expected, operational costs are estimated to increase at least another 5-7 percent. As a result, the increased costs associated with the operation and physical maintenance and data services and distribution have resulted in a \$1M per year shortfall since 2022. Our request for FY 2025 FPS funding of \$33M covers the costs of existing gages, precludes the loss of any streamgage sites, offsets the impact of inflation and allows for the installation of 30 new FPS sites to close the gap in streamflow data where they are crucially needed (see next section).

Cooperative Matching Funds (CMF) Program -- \$68M

The USGS works with more than 1,400 partners nationwide (federal, state, tribal, local and non-governmental organizations) using CMF to jointly support additional streamgages that cannot be funded through the FPS. This matching program began as a 50/50 cost share but has seen the federal contributions decrease to less than 30 percent over time. Our request of \$68 M for FY 2025 stands firm with last year's request.¹ These funds are needed to provide the required cooperative matching funds. Of that, \$33M is dedicated for the protection of the approximately 5,275 CMF-supported streamgages, already established and functioning nationwide.

Next Generation Water Observing System (NGWOS) - \$35M

Our coalition appreciates Congress' support of the Next Generation Water Observation System (NGWOS) at the same level as the past two years of \$35M to allow to continue the NGWOS program as intended. Funding at this level for FY2025 would allow USGS to continue development of Integrated Water Science (IWS) tools and science, applicable nationwide, in the fifth of ten planned demonstration water basins.

Why are USGS Streamgage network data especially important now?

It is more important than ever for Congress to ensure adequate funding for the USGS Streamgage Program. Short duration high intensity precipitation events are increasing in occurrence and volume creating flooding issues across the country and adding unpredictability to communities' abilities to plan for and fund water infrastructure investments. Extreme events such as flooding, drought and sea level rise in coastal regions

¹ See USGS FY2024 Streamgage Support Letter dated February 28, 2023: https://icwp.org/wp-content/uploads/2023/04/USGS-Streamgage-Letter-FY2024_Senate-Approps_2.28.23.pdf

are reasons why a robust streamgage network is an essential resource for water managers to plan and act under pressing conditions.

Without increased funding to maintain the current network of USGS streamgage sites, we are less equipped to make informed decisions pertaining to navigation, flood and hurricane risk predictions, drought determinations, and water supply forecasts. Streamgage data are crucial for use in decision making tools to provide critical life and property saving information. They augment research management decisions, maintain water dependent infrastructure, and provide essential public health and environmental condition information. Insufficient funding seriously compromises our national ability to address federal, state, tribal, local socioeconomic issues, including international treaty obligations.

The 2022 USGS Streamflow Monitoring Network analysis determined priority areas to maintain or improve coverage, resolution, and representation throughout the United States.² This analysis identified gaps in network coverage that, if further built out by establishing new streamgage sites, would enhance resilience to extreme weather events. These areas include coastal watersheds to reduce flood risk, regions in 39 states that lack streamflow information to assess how local climate is affecting floods and droughts, and areas of the U.S. where water supply is vulnerable due to reduced snowpack conditions.

Conclusion

With your help and continued support, Congress can enable the USGS to fulfill its Water Resources Mission Area goals by adequately funding the Federal Priority Streamgages network, Cooperative Matching Funds program, and NGWOS to move water science into the 21st century.

We are happy to answer your questions. For more background information about funding and the utility of the national streamflow information program from stakeholders' perspectives, visit ICWP's website: <https://icwp.org/streamgage-support/>.

Please contact any of us or Beth Callaway at the Interstate Council on Water Policy at: beth@icwp.org or (307) 772-1999.
